FUTURE CAREER SCHOOL

# Career Chart After 12th: Science

PCM, PCB and PCMB routes, seat odds, fee maths and a second plan

Last checked October 2026
futurecareerschool.com

Science keeps the most doors open and has the scarcest seats. Write a second route before results, not after.

## PCM and PCB at a glance

**Science (PCM)** · Physics, Chemistry, Maths

- B.Tech / BE: JEE Main, JEE Advanced, state tests (Scalable with a business layer)
- BCA, BSc Computer Science, Data Science (Scalable)
- Architecture: JEE Main Paper 2 or NATA (Scalable with a business layer)
- NDA: Army, Navy and Air Force (Not so scalable)
- Also open: design (Scalable), CA (Scalable with a business layer), BBA (Scalable with a business layer), law (Not so scalable)

**Science (PCB)** · Physics, Chemistry, Biology

- MBBS and BDS: NEET UG (Not so scalable)
- BSc Nursing, physiotherapy, allied health (Scalable with a business layer)
- B.Pharm, biotech, life sciences (Scalable with a business layer)
- Psychology, nutrition, forensic science (Scalable with a business layer)
- Also open: design (Scalable), CA (Scalable with a business layer), BBA (Scalable with a business layer), law (Not so scalable)

## How to read each science combination

### PCM: Engineering is one door, not the only door

PCM keeps the widest set of doors open: B.Tech, BCA, data science, architecture, NDA (Navy and Air Force), and all the any-stream routes. If JEE goes badly, a computer or data degree plus one shipped project is a strong second plan. Computer and data routes are rated Scalable; engineering degrees alone need a business layer; NDA is rated Not so scalable.

### PCB: NEET is a large gate with a small opening

MBBS seats total 1,36,939 for 2026-27, against over 22 lakh registrations. Write a full second plan (nursing, allied health, pharmacy, biotech or a data pivot) before the result, not after it. MBBS and BDS are rated Not so scalable because competition runs at several levels; biotech, health-tech and data routes scale better.

### PCMB: Two subjects give you two backups

If you studied both Maths and Biology, you can attempt NEET and JEE routes. That also means double the preparation load, so pick a primary exam early. Choose the track that leads to a scalable route, such as computing, data or biotech.

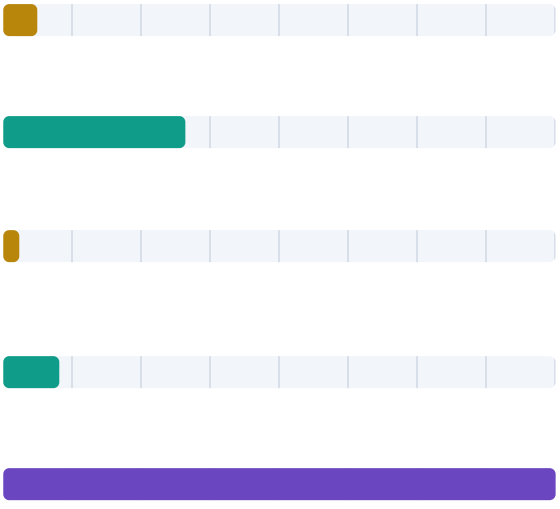

## Science routes row by row

| ROUTE | WHO CAN APPLY | ENTRY GATE | LENGTH | PAY SIGNAL (INDICATIVE) | THE CATCH | SCALABILITY AND HOW TO GROW |
|---|---|---|---|---|---|---|
| **BCA, BSc Computer Science or data science** | Most colleges want Maths or Computer Science in 12th; check each one | CUET UG or a college test | 3 years (4 in many four-year honours programmes) | Data analyst fresher pay averages about ₹4.1 lakh | Cheaper than B.Tech, but the degree carries less brand weight, so proof of work matters more. | **Scalable.** Skills can be sold directly as software, dashboards or automation, so income does not wait on a rank or a licence. *To grow: Ship real projects, then freelance or form a small agency. Stack AI use, automation and one business domain.* |
| **Design: B.Des, fashion, interior, UX** | Any stream | UCEED, NID DAT, NIFT entrance and college tests | 4 years | Graphic designer fresher pay averages about ₹2.4 lakh; a strong portfolio moves it up | Admission tests reward drawing and thinking speed. Prepare a portfolio early. | **Scalable.** Portfolio and skill decide pay, and a designer can freelance, consult or run a studio without a rank. *To grow: Build a portfolio, freelance, then specialise (UX for health or finance, brand identity) and publish case studies.* |

| ROUTE | WHO CAN APPLY | ENTRY GATE | LENGTH | PAY SIGNAL (INDICATIVE) | THE CATCH | SCALABILITY AND HOW TO GROW |
|---|---|---|---|---|---|---|
| **B.Tech / BE in computer, data or electronics** | PCM (Maths is compulsory) | JEE Main, JEE Advanced, state and private tests | 4 years | Software fresher pay averages about ₹5.4 lakh but ranges widely by college and skill | A branch or college label alone does not get hired. A visible project does. | **Scalable with a business layer.** Crowded when it is only a branch degree aimed at service jobs; it scales when you add product, automation or AI skills. *To grow: Build and sell one tool, or take paid automation work, while you study.* |
| **Architecture (B.Arch)** | PCM, with Maths required | JEE Main Paper 2 or NATA | 5 years | Pay starts modest and rises with a licence and a portfolio | Registration with the Council of Architecture is needed to practise. Drawing and model-making are tested, so start a sketch portfolio early. | **Scalable with a business layer.** The degree is long; income grows through a studio rather than a salary. *To grow: Build a small studio, interior or design-build service, or 3D visualisation freelancing.* |
| **Agriculture, veterinary and food science** | PCB or PCM for most programmes; check each college | CUET UG for ICAR seats, state tests; NEET UG for veterinary | 4 years | Government and company roles pay steadily; farming and agri-business pay varies | Seats are limited in good government colleges. Fieldwork is part of the job. | **Scalable with a business layer.** Salaried roles are modest; agri-business, processing and consulting can scale. *To grow: Start with a small agri-business, processing or agri-tech service while you study.* |
| **BSc Nursing, B.Pharm, physiotherapy** | PCB for nursing and physiotherapy; PCB or PCM for B.Pharm | State counselling, university tests and college tests | 4 years | Nurse fresher pay averages about ₹2.6 lakh; pharmacist about ₹2.5 lakh | Licence and registration rules apply. Pay rises through specialisation, not time alone. | **Scalable with a business layer.** Salaried care roles have a pay ceiling and licence rules, but clinics, home-care services and health-tech give a real business layer. *To grow: Add a specialisation, then build a clinic, home-care service or health-tech role.* |
| **MBBS, BDS and allied health** | PCB with English | NEET UG (over 22 lakh registered for 2026) | MBBS about 5.5 years including internship; postgraduate study adds more | Income grows late, after specialisation | Two hard gates: NEET, then postgraduate seats. Fees at private colleges can be very high. | **Not so scalable.** Competition at several levels: NEET, then postgraduate seats, then a practice. Seats are few against applicants, the years are long, and consistent effort alone does not guarantee a seat. Dentistry is also crowded. *To grow: If you still choose it, write a second route first. Growth comes later through a specialisation, a clinic or a health-service business.* |
| **Defence: NDA** | Army: any stream. Navy and Air Force: Physics and Maths | UPSC NDA exam, then SSB interview and medical tests | Academy training, then service | Paid training and stable service pay | NDA II 2026 had only 394 vacancies. Medical and height standards are strict. | **Not so scalable.** A very small intake, strict medical standards and a fixed pay ladder; most applicants do not get in. *To grow: Keep a parallel skill running so the effort is not lost if selection does not come.* |
| **BSc, BS or integrated MSc in pure science and research** | Science stream; the subjects you studied decide the options | CUET UG, IISER Aptitude Test, NEST or a college test | 3 to 5 years (more with a master's) | Fresher pay is modest; research and teaching careers need a master's or PhD | Most science jobs need a further degree or a strong applied skill. Decide early whether you want research, teaching or industry. | **Not so scalable.** A research career takes many years and few people reach stable senior positions; industry roles usually need a further degree. *To grow: Pair the degree with data, lab-service or science-communication skills so you have a way to earn while you study.* |

| ROUTE | WHO CAN APPLY | ENTRY GATE | LENGTH | PAY SIGNAL (INDICATIVE) | THE CATCH | SCALABILITY AND HOW TO GROW |
|---|---|---|---|---|---|---|
| **Aviation: commercial pilot and aircraft maintenance** | Pilot: Physics and Maths in 12th. Maintenance: diploma or degree routes | DGCA medical, flying school entrance, AME entrance | Pilot about 2 to 3 years of training; maintenance 2 to 4 years | Training is costly; pay rises with flying hours and experience | Training is very expensive and needs a medical fitness pass first. Check approved schools only. | **Not so scalable.** Training is very costly, a medical pass is needed first, and openings depend on airline hiring cycles. *To grow: Only choose it with the funds in hand and a second plan.* |
| **Merchant navy and maritime** | PCM for most deck and engine programmes | IMU CET or a company sponsorship test | 3 to 4 years, then sea service | Pay at sea is good, but you spend long periods away from home | Long absences, strict medicals and approved-institute rules apply. Avoid unapproved training. | **Not so scalable.** Long absences, strict medicals and a fixed pay ladder; limited ways to build a business from it. *To grow: Choose an approved institute only, and plan a shore-based skill for later.* |

## Seats against applicants

**NEET UG 2026: MBBS seats per 100 registered candidates**
**About 6**
1,36,939 MBBS seats against over 22 lakh registrations. Around 11.2 lakh qualified in the re-exam.

**JEE Advanced 2026: IIT seats per 100 qualified candidates**
**About 33**
18,826 IIT seats (18,951 with IISc Bangalore) in the JoSAA matrix against 56,880 qualified, out of 1,87,389 who registered.

**NEET UG 2026: government MBBS seats per 100 test-takers**
**About 3**
63,296 government seats against about 20 lakh who appeared. Private colleges hold the other 73,643 seats, and those cost far more.

**JEE Advanced 2026: IIT seats per 100 who appeared in both papers**
**About 10**
18,826 IIT seats against 1,79,694 candidates who appeared. Only about 32 in 100 of them qualified, and qualifying does not guarantee a seat in the branch you want.

**JoSAA 2026: total IIT, NIT, IIIT and GFTI seats**
**67,323**
Many more seats exist than IIT seats, which is why a strong non-IIT plan is a real plan, not a consolation.

## What the seat costs

| SEAT | FEE | THE MATHS | BUDGET RULE (FEE ÷ 0.10) |
|---|---|---|---|
| **IIT B.Tech, general category** | Tuition ₹1,28,250 per semester (₹28,250 for SC, ST and PwD). Hostel and mess are extra. | ₹1,28,250 × 8 semesters = about ₹10.3 lakh of tuition. Against the PayScale entry software average of ₹5.37 lakh, that is about 1.9 years of that pay, before living costs. | About ₹1 crore (₹10.3 lakh ÷ 0.10) |
| **MBBS, government quota** | Under ₹8 lakh for the whole course in the states compared | Only about 3 government seats per 100 NEET test-takers, so the fee is low and the competition is the real price. | About ₹80 lakh (₹8 lakh ÷ 0.10) |
| **MBBS, private management quota** | Above ₹60 lakh for the whole course in the states compared | At least 7.5 times the government total (₹60 lakh ÷ ₹8 lakh). The seat is easier to get and far harder to repay. | About ₹6 crore (₹60 lakh ÷ 0.10) |

The budget rule is a strict planning heuristic: keep the total education cost near 10% of the money you can commit, and protect the rest as runway.

## Exam dates to note

ENGINEERING

### JEE Main 2027 Session 1: 22 to 24 and 28 to 30 January 2027

These are the dates in the NTA examination calendar, with 31 January as a buffer day. NTA calls the calendar tentative, and the Session 2 dates and the application window are not announced yet.

NOT ANNOUNCED

### NEET UG 2027, CUET UG 2027 and the next NDA cycle

NTA's calendar for December 2026 to March 2027 does not list NEET UG or CUET UG. NDA II 2026 was held on 13 September 2026. Wait for each official notice before planning around a date.

## Read the chart by your exam result

### If the exam goes well

- Use counselling to compare colleges by course, fees and placement median, not by name alone.
- Budget the whole course before you accept a seat, including hostel and coaching.
- Start one small skill project before college begins so first year is not empty.

### If the exam goes averagely

- Apply to a route where your score is enough today, such as a good BCA, BBA or allied-health seat.
- Keep the entrance exam as a later option through CUET, lateral entry or postgraduate tests.
- Choose the college for teaching quality and internship access, not for the campus photos.

### If the exam goes badly

- Check what actually caused it: preparation, health, stress or the wrong exam for you.
- A drop year is worth it only with a fixed score target, a plan for money and a written skill-building side track.
- Exams can also be disrupted. NEET UG 2026 was cancelled and re-held on 21 June 2026 after paper-leak allegations, so a second plan protects you from more than a bad day.

## Test every shortlisted route: 4 checkpoints, then 3 gates

**1 Biology**
How do you actually work best: abstract study, business thinking, people, or tools and systems? Choose the daily reality, not the label.

**2 Context**
Marks, money, family situation, school options, commute and emotional readiness. A route right on paper can be wrong for now.

**3 Market**
Where does the route lead later: real roles, real skills, real progression? Map it forward before you choose.

**4 Survival**
Will it hold up in an AI-shaped market? Domain skill plus communication, digital fluency and judgment lasts longer than routine work.

**5 Proof of Skill**
Complete one small real task that resembles the route before you lock it.

**6 Proof of Communication**
Explain in 30 to 90 seconds why the route fits you, where it leads and what you will test next.

**7 Proof of Value**
Get grounded feedback from a teacher, senior or professional who does this work, and pressure-test your reasoning.

## Your one-page plan

Three routes I shortlisted:

The entry gate and date I verified, and where:

My second route if the exam goes badly:

One small real task I will finish this month:

Two people inside the route I will ask:

**Read this first:** Seat numbers, exam dates, fees and pay figures change every year and differ by state and college. Use this chart to compare routes, then confirm each date and rule on the official exam site before you act.

**About pay figures:** Pay figures here are indicative ranges and averages from public profiles, not exact or guaranteed amounts. Pay differs by city, employer, skill and year, and markets change. Check current job listings (for example on LinkedIn, Naukri or Indeed) and ask people working in the role before you decide.

**How we rate scalability:** We rate a route Scalable when steady learning and a whole-picture approach (skills, proof of work, communication and a little business sense) can grow your income and reach into consulting or a business of your own. A route marked Scalable with a business layer is also a good option for us, as long as you plan that layer: consulting, a studio, a practice or a product. Crowded fields, long ladders of entrance exams and ranks, and careers where very few people reach the top after many years do not count as scalable, so we mark them Not so scalable and list the risk beside them. Well-known routes such as MBBS and BDS, NDA, government exams, integrated law, pilot training, merchant navy and pure research stay in the chart so you can see what they carry, but they are rated Not so scalable. Success there depends on beating rivals at stage after stage, many years pass before pay grows, and few people reach the top. Consistent effort alone does not guarantee a result. If you choose one, write a second route and keep a skill running that can grow on its own.

**The route is the base layer. The skill portfolio on top raises your ceiling.**
