FUTURE CAREER SCHOOL

Career Chart After 10th: Science

Science: routes, what each opens and closes, and your next move

Last checked October 2026
futurecareerschool.com

Science is the widest technical and medical gateway, and also the hardest to reverse: Maths and Biology can only be dropped, never added later. Pick the combination for the work you want to do, not for the label.

The routes in this chart

SCIENCE

Science with Maths (PCM) · Class 11 and 12 (2 years), then a degree · about 5–6 yrs to first full-time work

Physics, Chemistry, Maths

ENTRY

Class 10 pass. Many schools set their own minimum in Maths and Science for this group, so ask the school before you count on a seat.

BEST FOR

Students who enjoy solving problems step by step, can sit with Maths and Physics for two years, and want engineering, computing or research left open.

WATCH OUT

Taking PCM because everyone else did. A weak Maths base shows up in Class 11 within a term, and two drifting years are expensive.

SCALABILITY

Scalable with a business layer. The doors it opens (engineering, computing, data) can grow into products and consulting, but the engineering entrance ladder is crowded and a branch degree alone is not scalable. To grow: Add coding, automation or AI skills and build one project people use.

WHAT IT KEEPS OPEN

- B.Tech / B.E. (4 years) through JEE Main, state engineering entrance tests, BITSAT and similar
- B.Sc in Physics, Chemistry, Maths, Statistics, Computer Science and data subjects
- BCA and other computing degrees
- Architecture (needs Maths, plus the architecture aptitude test)
- NDA: the Air Force and Navy wings need Physics and Maths in Class 12

WHAT IT CLOSES

- MBBS, BDS and other NEET-based medical courses (these need Biology)

FIRST MOVE THIS MONTH

Solve a full chapter of Class 11 Maths and Physics on your own and note where you got stuck and where you wanted to keep going.

SCIENCE

Science with Biology (PCB) · Class 11 and 12 (2 years), then a degree · about 5–7.5 yrs to first full-time work

Physics, Chemistry, Biology

ENTRY

Class 10 pass. Many schools set their own minimum in Science for this group.

BEST FOR

Students who are drawn to the human body, plants, animals or lab work, and who accept that medicine is a long road with few seats.

WATCH OUT

Treating NEET as the only reason to take Biology. MBBS seats are scarce, so write a second route (allied health, life sciences, pharmacy) before results, not after.

SCALABILITY

Not so scalable. Its best-known doors (MBBS, BDS) mean competition at several levels and very few seats, so effort alone may not lead to a seat. The scalable doors are biotech, health-tech, nutrition and data. To grow: Write a second route, and add a data, health-tech or science-communication skill beside Biology.

WHAT IT KEEPS OPEN

- MBBS, BDS and other medical seats through NEET UG
- B.Sc Nursing, physiotherapy, medical lab and other allied health courses (entry route differs by state; verify)
- B.Pharm and pharmacy routes (verify whether your state accepts PCB or needs Maths)
- B.Sc in life sciences, biotechnology, microbiology, agriculture and veterinary routes (check the entrance test)

WHAT IT CLOSES

- B.Tech / B.E. (these need Maths in Class 12)

FIRST MOVE THIS MONTH

Spend one day with a nurse, lab technician, pharmacist or doctor you can reach through family or school, and list the tasks they actually did.

SCIENCE

Science with both (PCMB) · Class 11 and 12 (2 years), then a degree · about 5–7.5 yrs to first full-time work

Physics, Chemistry, Maths, Biology

ENTRY

Class 10 pass. Not every school offers the combination, and the load is the heaviest of all.

BEST FOR

Students who are genuinely strong in both Maths and Biology and are still undecided between engineering and medicine.

WATCH OUT

Picking it to avoid a decision. Five heavy subjects often lower scores in all of them, which weakens both doors.

SCALABILITY

Scalable with a business layer. It keeps the widest set of doors, but only the computing, data and biotech doors scale. Two heavy exam tracks at once can leave little time to build skills. To grow: Choose one primary track early and keep one skill project running.

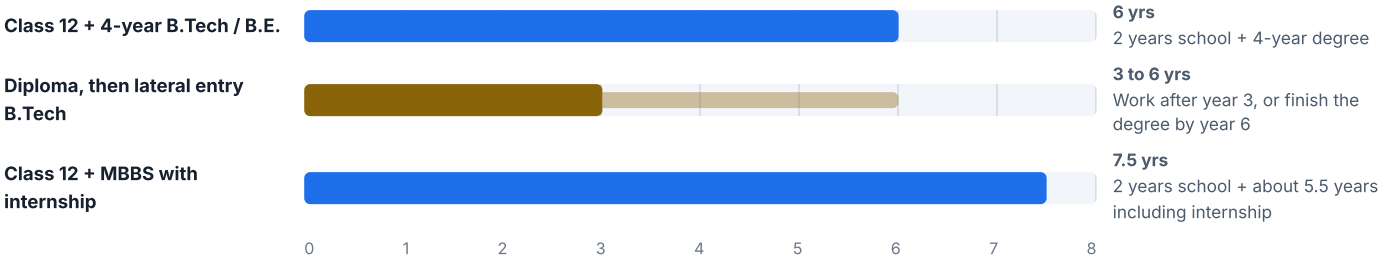

WHAT IT KEEPS OPEN

- Keeps both the engineering and the medical doors open until Class 12 ends

FIRST MOVE THIS MONTH

Check last year's school results for the PCMB group and ask how many students scored well in both Maths and Biology.

Time to first full-time work

Years counted from the day Class 10 ends to the earliest standard full-time start. They show time, not pay. Postgraduate study, repeat attempts and licensing exams add years in some routes.

Five mistakes to avoid

- **Choosing by marks alone.** High marks tell you what you can enter, not what you can sustain for two to five years.
- **Copying friends or relatives.** The route that worked for a cousin worked for their strengths, money and city.
- **Dropping Maths or Biology without checking.** Maths is needed for B.Tech and Biology for NEET medical seats. Check what you may want before you drop either.
- **Paying before verifying.** Check that the institute is approved, the fee is the total fee and the course is recognised.
- **Treating the route as the whole plan.** Every route leads to crowded and well-paid rows alike. The skill layer on top is what separates them.

Test every route you shortlist: the 4 checkpoints

1 Biology
How do you actually work best: abstract study, business thinking, people, or tools and systems? Choose the daily reality, not the label.

2 Context
Marks, money, family situation, school options, commute and emotional readiness. A route right on paper can be wrong for now.

3 Market
Where does the route lead later: real roles, real skills, real progression? Map it forward before you choose.

4 Survival
Will it hold up in an AI-shaped market? Domain skill plus communication, digital fluency and judgment lasts longer than routine work.

Then pass the 3 gates before money or years are locked in

1 Proof of Skill
Complete one small real task that resembles the route before you lock it.

2 Proof of Communication
Explain in 30 to 90 seconds why the route fits you, where it leads and what you will test next.

3 Proof of Value
Get grounded feedback from a teacher, senior or professional who does this work, and pressure-test your reasoning.

Your one-page plan (write it, do not just read it)

Route I am leaning toward:

Second route I would accept:

Subjects or trade I need for it:

The exam or entry rule I verified, and where:

One small real task I will finish this month:

The person I will ask for feedback:

Verify on the official source before you pay

NATS (apprenticeship training)	Apprenticeship-style, learn-while-working training for diploma and technical graduates.	nats.education.gov.in/about-us.php
AICTE	Check that a diploma or engineering institute is approved before paying.	www.aicte-india.org/
NTA (JEE Main, NEET UG, CUET UG)	Exam eligibility, syllabus and dates for the entrance tests that start after Class 12.	nta.ac.in/

Read this first: Entry rules, minimum marks, fees and seat numbers differ by state, board and year. Treat this chart as a map for asking better questions, then confirm every rule on the official site before you pay or lock a subject.

The route is the base layer. The skill portfolio on top raises your ceiling.
